

We're mixed rain/snow as we approach daybreak and this event is in the process of wrapping up in the next hour or so. The weekend storm is looking like rain for our area with any wintry weather pegged for further up north. There is a fair amount of rain during the overnight hours, so watch for minor flooding. Temps are rising as we're at least into the 40s and likely 50s by the end of the night. The end of the storm is faster, which helps reduce the risk of post-event, widespread black ice. A Sunday morning end to the precip should help with some drying (along with wind) as temps fall through the 30s into the 20s during the afternoon. Still, monitoring for remaining wet spots is necessary as anything wet will turn to ice and that is going to be hard to remove if not treated since temps fall into the teens and single digits Sunday Night.

HAZARD OVERVIEW			
Hazard	Fri	Sat - Sun	Description
Snow	Minimal	None	Areas of light snow/rain in the process of ending.
Ice	None	Low	Falling temps Sunday can lead to remaining wet spots turning into areas of black ice (afternoon and evening).
Flooding	None	Low	Sat. Night: 0.75 - 1.50" of rain can lead to minor poor-drainage issues.
Coastal	None	Moderate	Minor tidal flooding with the Sunday AM High Tide
Extreme Cold	None	High	Falling temps Sunday drop to the single digits at night. Wind chills < 0

NEAR TERM FORECAST	
 <p>Precip Probability</p>	
Friday	Areas of light snow and rain quickly tapering to just sprinkles 6:30 - 8:00 AM. Clouds are stubborn to break for some limited PM sun. High 43 - 47 NNE winds become W, 5 - 15 mph High Tide: 5:56 PM
Fri Night	More breaks in the clouds developing as it turns clear at times. Low 30 - 35 WNW winds 5 - 10 mph High Tide: 6:32 AM
